

Transforming health and humanitarian systems through **education, outreach, and innovative solutions**

## Healthcare: Delivery & Operations

- Hospital/clinic operations and patient care optimization
- Decision support tools to guide decision making
- Resource allocation to capacity management
- Advanced analytics across the decision making spectrum

## Public Health: Global and Local

- Descriptive, predictive, and prescriptive analytics to improve efficiency, effectiveness, and/or equity
- Cost-effective modeling for policies on prevention and treatment reimbursements
- Models and intervention strategies for disease prevention and treatment

## Humanitarian: Short and Long-term

- Disaster mitigation, preparedness, response, and recovery
- Global supply chain design for delivery of products, services, and solutions
- Resource allocation and capacity management (e.g., food, response to disease outbreaks)

**6-day Professional Certificate Program in Health & Humanitarian Supply Chain Management**

**Annual International Conference on Health & Humanitarian Logistics (2009-2016)**
